The Lancaster Products Line of Material Processing Equipment

High Shear K-Series Mixers

Low Shear L-Series Mixers

K-Lab Mixers

Pug Mills

Roll Crushers

Table Feeders

Automated Material Handling and Batching Systems

AutoBrik Molded Brick Making Machines

Lancaster® Rotary Table Feeder

Lancaster Rotary Table Feeders are very useful in converting an intermittent batch process into a continuous material feeding process. They are also particularly helpful in moving sticky or hard to feed materials.

The Lancaster Rotary Table Feeder consists primarily of a transition cone, a rotating table, a discharge plow, a drive mechanism, and a support structure. The table feeder uses a large flat rotating table to continually bring material from the cone to the discharge plow. The table has vertical pins attached inside the cone area. There is also a cone scraper blade attached to the table. As the table turns, the blade and pins agitate the material and keep it evenly flowing to the discharge plow. An adjustable seal band rides on the outer surface of the table to prevent material from exiting the table feeder outside the discharge area. The discharge plow is used to bring the material to a fixed point as it leaves the table.

The rotating pins and the inner rotating plow provide a constant feed of even the most difficult materials. The amount of material leaving the table feeder can be controlled by changing the angle of the discharge plow either manually or automatically. The feed rate can also be controlled by using a variable speed table drive motor to adjust the speed of the bottom rotating table.

For bin discharging applications, the Lancaster Table Feeder attaches directly to the bin walls forming the bottom of the bin. Some of the most difficult flowing materials can then be evenly fed from the bin.

The table feeder can also convert a batching process into a continuous process. The cone over the table is used as a surge hopper to temporarily store the material batch while the table feeder continuously discharges the material.

Options available:

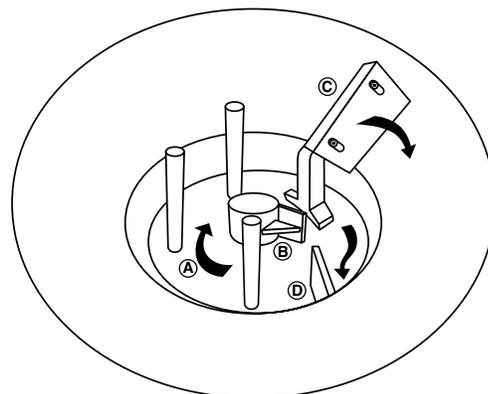

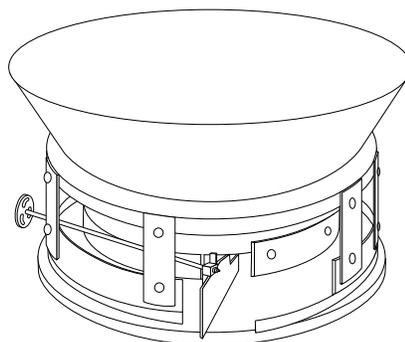

- Stainless steel construction
- Dual discharge
- Manual or power discharge gate opening control

Standard sizes are 24" to 60" diameter.

Please inquire about our testing and rental units.

Visit our website at: www.lancasterproducts.com

All information is subject to change without notice.
Parts and assembly made in the U.S.A.

- A - Direction of Rotating table
B - Stationary plow to clean inner area of table
C - Rotating scraper blade
D - Adjustable plow directing material flow out of table feeder
